An exposition of reverberation phenomena in enclosed
spaces is given and hence the characteristic bending of
reverberation curves is predicted. The slope at the
commencement of such a curve is shown to be pro-
portional to the weighted arithmetic mean of the
damping factors of all the relevant natural vibrations.

It was attempted to trace the activity of the chrome
oxide as oxidation catalyst in various temperature
ranges to a common cause. Besides chrome oxide,
ironoxide and copper oxide at a specific preparation
temperature also show a maximum of activity in re-
gard to oxidation of ferrocyanide. This phenomenon is
connected with the removal of adsorbed H₂O films from
